bright

small
brief

S4 1/2 course of effects from source to target not visible. only effects at target.

S4 1/2 object resting on flat plain. crackling sound shimmer. No people around. some of vertical oblique perspective from air.

S4 1/2 doesn't seem to be line of sight

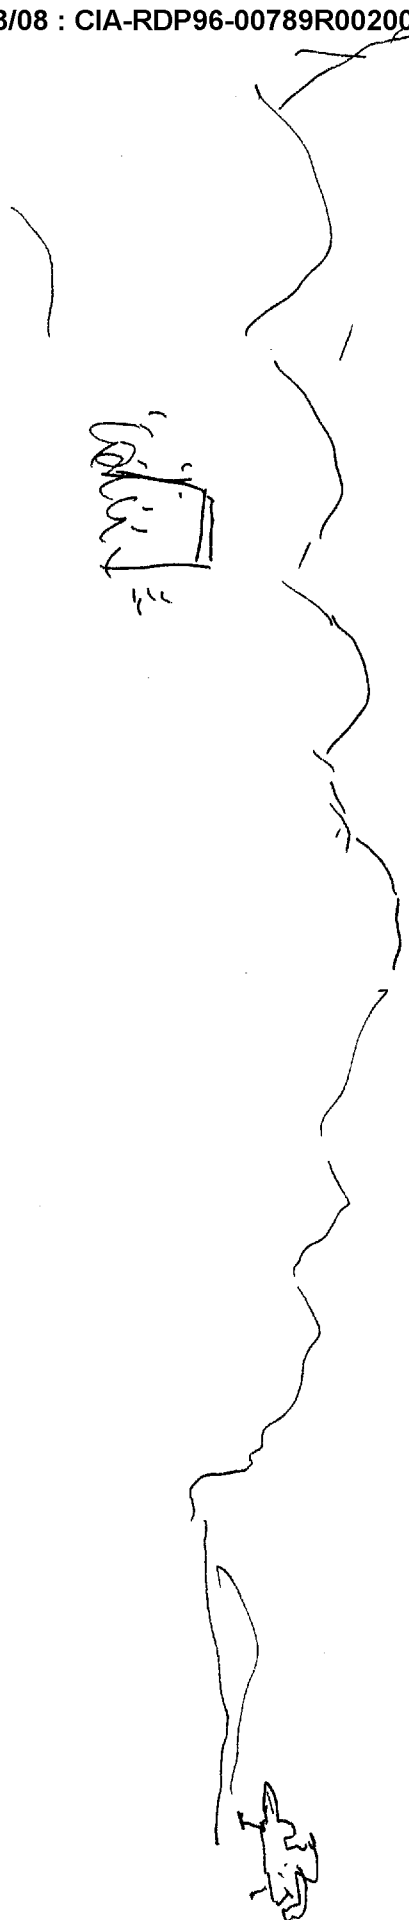

uncertainty

distortion

S4 1/2 waviness, wavery, pushy + pull of minute components i.e. "undulancy" Small bend but aggregate effect is extreme. Some directability but how and how precise uncertain since some effects are not visible

S4 1/2 ~~how~~ people feel how a person would feel when viewing a successful CRV session for the first time. Though session not perfect + provided some mixed results, the fact that it worked made people ~~settle~~ "exstatic"

5/12
Since that operational test occurs/occurred ± 3-4 months from
now.

perceived effects of object on target start from bottom and go up (though may not always happen in this direction), intense, bright "magnesium-like" Sparkings. Above Sparkings target structure in fact & normal.

Below Sparkings structure target is "all messed up." Puffs of dust? smoke? debris? erupted around target at initial engagement.
